I've been trying to figure out the proper way to modify the icon of my applications in the Intel AppUp in Linux, but haven't been able to figure out how. Can someone tell me the proper way to do this in Linux? A: Yes, in the Intel AppUp for Linux there's an item named Icon [Image]. Using it, you can modify the icon for all the applications installed in your PC. Derivation of the P wave in an infant with transposition of the great arteries. The electrocardiographic P wave has been difficult to identify in some infants with transposition of the great arteries (TGA). This case illustrates the difficulties of describing the P wave in infants with TGA and its usefulness in understanding the underlying anatomic basis. A 12-day-old girl with TGA was evaluated and treated. A general decline in right ventricular function was noted, and the end diastolic right ventricular dimension increased from 3.2 cm to 4.4 cm. A right-

## What's New In SX System Suite?

SX System Suite is a toolset to detect, remove, or manage spyware, adware and malware on your PC. It is extremely easy to use and offers 10 robust utilities in one app window. With this package of utilities you can quickly detect, manage, and remove spyware and other malware from your PC. This package can be started directly from Windows Explorer. It can also be started directly from an administrative command prompt. Or you can even run it from the start menu. In addition to its wonderful functionality, SX System Suite also comes with a user-friendly setup and a simple interface that is easy to navigate. The package consists of: SX System Suite - a single application that has 10 tools: + MBAM - Malwarebytes Antimalware - detects and removes spyware, adware, and potentially unwanted programs. + Windows UAC Remover - helps to manage UAC settings to make sure your PC is running in the safest possible way. + Process Explorer - displays all the running processes on your PC. You can start and stop them, pause and continue them, view properties, and even kill any process. + Registry Cleaner - removes invalid registry keys, and optionally, fixes registry problems. + Process Explorer 2 - displays all the running processes on your PC. You can start and stop them, pause and continue them, view properties, and even kill any process. + Internet Security 2015 - a free Internet security software that helps to keep your PC secure and clean. + MyDefend - a lightweight security application. It blocks malware from making changes to your computer. + EXE Scan - verifies executable files for anomalies in the header field, like differences in checksums or wrong size of raw data. + Hash Verifier - checks the MD5 or SHA256 checksum of any downloaded file by comparing it to a hash string, while Malwarebytes Anti-Malware: scanning files and uninstalling the malware that it detects. + SpyBHOremover - helps to spot malicious Browser Helper Objects installed in Internet Explorer and gives you the possibility to remove them, while Malwarebytes Anti-Malware: scanning files and uninstalling the malware that it detects. + SpyDLLRemover - removes spyware and associated files from your PC. It finds and removes most spyware and adware applications from your system. It also manages any ActiveX, shell extensions, or browser helper objects that may be causing system issues. + Resource Monitor - monitors the PC's CPU and memory usage. It shows graphs and makes it easy to view and control your PC's resources. + Free RAM Viewer - shows the amount of memory that is currently being used by each process. + Free Unused Space Viewer - shows the size of the free space that is not used by other programs. + Process Monitor -
