This is an excellent program. I've used it for the past 3 years in a semi-professional and semi-professional environment and have found it to be reliable and a better software than Photo Mechanic. It's intuitive, easy to learn and powerful. It supports most of the professional and semi-professional file formats, as well as RAW images. I've used PS for years now. The biggest problem I still have is the bristle brush applies a layer mask and the resulting file is not editable because it's a NON editable TIFF. I've had to get away from PS because no solution to this problem was discovered. This is a big problem as I build a lot of my work with lots of masking. I have been using PS for a few years now. I love it. It would be a no brainer to switch over from Lightroom, but frankly, either program does a fairly good job. If I were building a large catalog, I might lean toward Lightroom for more functional flexibility, but for fairly simple jobs, it's hard to beat the performance of Photoshop. I've been using PS for years and it's still my go to solution for most image editing. Because I design for the web, I've been using PS for years and PS4 is a great price. Still, if I had to choose between PS and Lightroom, I'd pick lightroom. However, if you don't need Lightroom's functional flexibility, I'd still favor PS for performance. Hats off to Adobe - this is my favorite photo editing software.., I've successfully used Photoshop to edit RAW images and I'm happy to say that I've never lost a single image. For some reason my photos don't seem to corrupt despite the fact that I use my PC for others things. When I had my laptop, I had to try many different free/purchase software to edit my RAW images with little success.. and I uses Photoshop once or twice a year.
