From time to time, we encounter sites that alter or delete our cookies. This can be quite inconvenient, since most browsers automatically delete cookies after a period of inactivity. While some cookies contain sensitive information that must be protected, others contain information that is useful, such as user's preferences. Why is this extension needed? What are cookies? Cookies are small files that store information on your device. We use cookies to track where you go on the web, what you click, and in some cases, what you buy. Cookies can also be used to help websites remember you. Once you add a cookie to your browser, it is stored on your device as a file called a cookie. The cookie file contains several pieces of information about the website, including things like which page you visited and your user ID. That way, when you come back to the website, your browser sends the cookie along with the request so the website can use your information. What can't EditThisCookie Crack Keygen do?
