You can download Acoustica CD/DVD Label Maker 3.17 and all version cheats listed on our website for free. Download new version of Acoustica CD/DVD Label Maker for Android now!Q: Django, Pyspark, Dask, Jupyter: How to get the latest Dataset from a Python session I am working with Dask Dataframe in Jupyter Notebook in Jupyter. I am trying to start my Spark job using spark-submit. The dataset used by the Spark job is stored in S3 and fetched to the Jupyter. I want to set this Spark job, so that each time I start Jupyter, the latest dataset is fetched from S3, so that I do not have to export the datapreview everytime to see if the job is up to date or not. I want to follow the approach mentioned here: How to load the most recent dataset into a Jupyter/pyspark notebook? But that is not working. The code: `import dask.dataframe as dd from dask.distributed import Client client = Client('xxx-xxxx-xxx.c2.xxxx.com:7020', 'username', 'password') ds = client.kernels.hot.hot_dataset(KEY_LOCATION) dd.compute().run(ds)` Error: ValueError: You need to provide a valid metadata directory in `spark.sql.shuffle.io.metadata.dir` when using `SQLContext.SparkContext.setConf`. How to fix this? A: PySpark is based on the ability of a Jupyter Notebook to switch between different kernels (Python interpreters). While it should be easy to store a source of data when working on a notebook, if you want it to be the latest you don't want to copy it over every time, you want to re-read it from the source. So if your notebook is prepared to use multiple kernels, you need to make the following adjustment in your code. The call: `client = Client('xxx-xxxx-xxx.c2.xxxx.com:7020', 'username', 'password')` The adjustment: `ds = client.kernels.jupyter.hot.hot`
