With its wealth of features, Photoshop is a big productivity li>PenTile Screen - Not an issue for me, as I can run Photoshop on a MacBook or Macbook Pro uncluttered with physical icons. Potentially it's not optimal for some, however, since their screen resolution is not the same as mine. Why use a 32:9 aspect ratio 667px screen (your Mac is likely a 17 inches Monitor, so that's not exactly the typical 1024 x 768 or "square") of the Macbook Pro? To benefit from the Macbook Pro's high resolution display, you need to zoom in. Fine, zoom in, I'll just resize my 26 and a half inch monitor. I'd like to work on a 10.7" retina display MacBook, but I honestly don't need that much. Photoshop on the 13" MacBookPro isn't a huge problem, except for

the silly resolution and aspect ratio, but that's not a very attractive display for a photo editing desktop environment.
