Some time ago, I wanted to test this Photoshop app on a Mac. I've never had much experience with it but thought I'd like to see what the experience was before making my review. It was then that I discovered that Apple had bought the company and that it was now called Adobe and that it has a completely different user interface. This was a disappointment because I don't ever use its web-based interface for anything other than occasional viewing and annotating images on my iPad Pro. Like others, I was surprised when I downloaded it and decided to try it out. I found the interface far more intuitive than in previous versions. I would not want to use it for fine-grained editing or for manual retouching. But, I would use Adobe Photoshop 2019 for most of the "bigger" work, and I find it surprisingly easy to navigate. I use it as a primary app, but there are other Adobe apps that I use if I want something a bit different. For example, I use QuarkXpress, which is basically QuarkXPress to create a catalog, sometimes use InDesign to create a brochure, and/or use Lightroom to organize and view images. I've worked with Brackets , There is a new Find tools option and its usage includes showing more photos in Search tool results. The new brush features in Painter panel are now available in the shape tool. Font properties can be easily changed from the Inking panel. printing is supported. The background of hollow shapes can now be set. The new tool for adding and organizing pressure sensitive layers can be found in the Layers panel. Users can now group locked layers and add a stroke to the group.) The selection Shadow tool can be found in the tools panel.
